Application note No. 3011. Rev. 1.5

NucleoCounter® NC-3000™

Viability and Cell Count using the Via1-Cassette™ - Insect cells

Product description
The NucleoCounter® NC-3000™ system enables the user to perform automated cell counting and analyses of a broad range of eukaryotic cells.

Application
The Via1-Cassette™ used together with the NucleoCounter® NC-3000™ facilitates determination of viability and concentration of cell suspensions by measuring cell counts (total and non-viable) per volume in one simple step.

Introduction
In order to determine viability and cell concentration, a sample containing cells in suspension is drawn into the Via1-Cassette™. The inside of the Via1-Cassette™ is coated with two different dyes, Acridine Orange staining the entire population of cells and DAPI staining the non-viable cells, respectively. The volume of each Via1-Cassette™ has been calibrated to give a high precision of the resulting count. The Via1-Cassette™ is placed in the NucleoCounter® NC-3000™ where cell concentration and viability are determined.

Procedures
If the cell line to be investigated is adherent or semi-adherent, then start by getting all cells into suspension using the preferred method of your laboratory (e.g. trypsin/EDTA treatment). Although NucleoCounter® NC-3000™ is able to count aggregated cells the accuracy is higher for single cell suspensions.

Materials needed
- Cells to be counted
- Via1-Cassette™

1. The cell suspension is mixed to obtain a homogenous suspension. Draw a cell sample by inserting the tip of the Via1-Cassette™ into the cell suspension and pressing the piston.
2. Immediately place the loaded Via1-Cassette™ on the tray of the NucleoCounter® NC-3000™, select the “Viability and Cell Count Assay (Insect Cells)” and sample unit Via1-Cassette™ and press RUN.

After approximately 1 minute the viability (in percent) and the concentrations (cells/ml) of all cells are displayed in the result fields. Moreover, in the result tab extended results are provided showing the cell concentration of non-viable cells, a rough estimate of the cell diameter (in μm) and information about cell aggregation (“clumpiness”).

Note
To assure reliable results, it is recommended that the total cell concentration of the cell suspension should be in the range of 5\times10^4 cells/ml to 5\times10^6 cells/ml. If the concentration of cells is below 5\times10^4 cells/ml then the cell concentration may be increased by centrifugation followed by resuspension of the pellet using growth media or PBS. The resuspended cell sample is then treated as described above.
If the total cell concentration is above 5\times10^6 cells/ml, the cell suspension can be diluted with growth media or PBS to achieve the desired concentration. The diluted cell sample is then treated as described in the procedure.
Viability
The viability is calculated as follows:

\[
\% \text{ viability} = \frac{C_t - C_{nv}}{C_t} \times 100\%
\]

- $C_t$: The total concentration of cells
- $C_{nv}$: The concentration of non-viable cells

The percentage of viable cells in the cell suspension can be determined using this formula.

Determination of count and viability of Sf-9 cells. The cells were harvested, loaded into a Via1-Cassette™ and analyzed using the Viability and Cell Count Assay (Insect Cells). The total cell population is stained with acridine orange and appears green while non-viable cells are stained with DAPI that appear blue. An insert shows a close up of a part of the image.
Troubleshooting

Inaccurate and imprecise counting:
When setting up a new cell line it is important to inspect that the cell line is counted correctly. The cells included in the total count can be marked by clicking on the overlay button in the bottom right corner of the image. Visual inspect the image to evaluate in the vast majority of the cells has been counted correctly. If this is not the case right click on the image file in question and choose “Show Raw Data”. Inspect the gates displayed in the Plot Manager. If the gating is inappropriate right click on the image file in question again and choose “Start Protocol Adaptation Wizard”. Adapt the gate(s) to cover the cell population (do not include debris and very large objects) and save the changes to a new protocol. Note that the user is responsible for defining appropriate gating of the particular cell line.

Handling and storage
For handling and storage of ChemoMetec instruments and reagents, cassettes and NC-Slides refer to the corresponding product documentation. For other reagents refer to the material data sheet from the manufacturer of the reagents and chemicals.

Warnings and precautions
For safe handling and disposal of the ChemoMetec reagents, cassettes and NC-slides refer to the corresponding product documentation and the NucleoCounter® NC-3000™ user’s guide. For other reagents refer to the safety data sheet from the manufacturer of the reagents and chemicals required for this protocol. Wear suitable eye protection and protective clothes and gloves when handling biologically active materials.

Limitations
The NucleoCounter® NC-3000™ system is FOR RESEARCH USE ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE. The results presented by the NucleoCounter® NC-3000™ system depend on correct use of the reagents, NC-slide and the NucleoCounter® NC-3000™ instrument and might depend on the type of cells being analyzed. Refer to the NucleoCounter® NC-3000™ user’s guide for instructions and limitations.

Liability disclaimer
This application note is for RESEARCH PURPOSES ONLY. It is not intended for food, drug, household, or cosmetic use. Its use must be supervised by a technically qualified individual experienced in handling potentially hazardous chemicals. The above information is correct to the best of our knowledge. Users should make independent decisions regarding completeness of the information based on all sources available. ChemoMetec A/S shall not be held liable for any damage resulting from handling or contact with the above product.

Product disclaimer
ChemoMetec A/S reserves the right to introduce changes in the product to incorporate new technology. This application note is subject to change without notice.
