

Operator Training and Certification

For GMP personnel

Operator Training and Certification Program

ChemoMetec is dedicated to helping our customers achieve success and fully benefit from using our instruments. To this end, we offer a training program designed to teach manufacturing staff how to correctly use our instruments while preventing errors or misuse.

Our program documents that operators have been formally trained on ChemoMetec's instruments and are certified to use them in a GMP environment, helping to fulfill GMP training requirements as per US and EU regulations.

What This Program Includes

The Operator Training and Certification program involves both theory and hands-on training, delivered by ChemoMetec staff. Attendees will be thoroughly trained to do the following:

- Operate our instruments and software correctly and as specified by ChemoMetec
- Avoid common mistakes that lead to incorrect results
- Troubleshoot in different situations

Training of one group typically lasts half a day. For any specific training requests, please reach out to us at training@chemometec.com and we will evaluate whether the request can be incorporated into the training.

Certification of Training

All attendees will be thoroughly tested during and after training to verify their knowledge. These tests are designed to minimize the risk of errors and misuse, which may lead to costly delays and mistakes. Upon the successful completion of the program, attendees will receive a certificate of training.

Training certificates will be kept and organized by ChemoMetec and can be requested at any time.

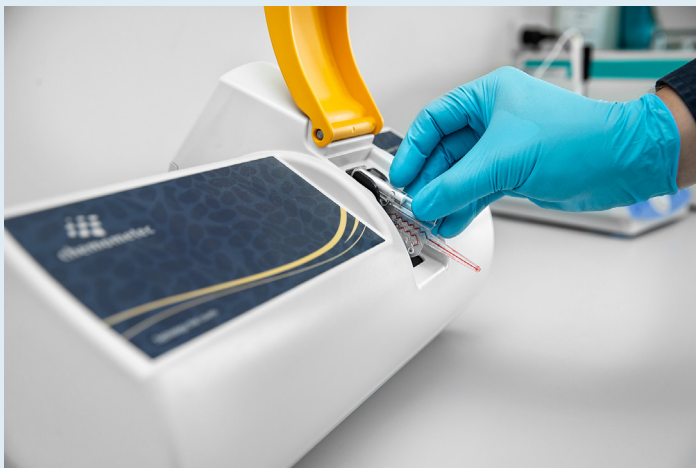

All-inclusive Package

Let us know the time, location and number of attendees and we will take care of the rest. We can provide instruments, consumables, paperwork and everything else needed for the training, freeing up management resources to focus on other challenges.

Schedule Training

To schedule training, please send an email to training@chemometec.com.* You can order training ad hoc or schedule recurrent training sessions depending on your individual needs. If you have waves of new hires starting, let us know in advance so we can help avoid any bottlenecks.

*Minimum of 4 attendees required to schedule training.

About us

ChemoMetec is a worldwide leading manufacturer of cell counting and analysis equipment.

We specialize in developing and producing high-precision instrumentation, delivering consistent data for thousands of customers across biotech, pharma and academic segments.

Designed, manufactured and tested in Denmark, our instruments and consumables are built with quality materials and dedicated expert workmanship.

Our patented technology ensures high-quality analysis, consistency between instruments and elimination of user variation. Known for their reliability, high precision and easy-to-use software, our instruments enable expert and novice users alike to experience advanced cell analysis in a single click.

Rapidly becoming recognized globally as the gold standard for cell count and viability analysis, our technology delivers the highest level of consistency and precision in cell counting combined with advanced data handling to meet your compliance needs.
